# Curriculum

Each MBA program at Saint Leo University is comprised of 36 credits (or 12 subjects):

## Business Core (21 credit hours)

**MBA 501 - Management Essentials:** This course focuses on the basics of management by introducing students to business environments in which they focus on the big picture, identify internal and external opportunities for growth, and manage resources. The course will also present students with management techniques to help them stay current and apply creative solutions to problems. Students will be introduced to the programmatic themes of globalization, leadership, teamwork, and ethics.

**MBA 525 - Professional Development:** This course is designed to give MBA students a tangible head start in acquiring and honing numerous core skills essential for success in the MBA program and the business world. The emphasis will be on the development of professional skills and perspectives, such as business writing, coaching and counseling, conflict resolution, effective business protocol, interviewing, intercultural awareness and sensitivity, negotiating agreement, and public speaking.

**MBA 531 - Human Capital for Organizational Performance:** This course is an advanced introduction to the major theories and issues in the study of human behavior in work organizations. This course will provide students with a strategic and analytical approach to complex behavioral problems within organizations. In addition, the design and implementation of management practices for aligning human resource practices and the strategic intent of the organization are also incorporated to give the student a more complex framework for managerial decision making. The course also integrates an overview of commercial law as it affects day-to-day business decisions. Topics include: perception, motivation, leadership, job satisfaction, group dynamics, stress, organizational climate, and communication processes, staffing, employee training and development, compensation and benefits, legal issues, union versus non-union issues, safety and health issues, and cross-cultural and expatriate issues.

**MBA 540 - Managerial Economics:** This course explores the concepts of economic optimization, the estimation of demand, and cost and pricing analysis. An introduction to economic forecasting and decision making under conditions of risk and uncertainty is also included.

**MBA 560 - Financial and Managerial Accounting:** This course focuses on the study of accounting concepts and standards applicable to presentation of financial information to interested users, structure, uses and limitations of financial statements, and measurement systems related to income determination and asset valuation. The course also considers the discussion of internal and external influences on accounting decisions.

**MBA 565 - Marketing:** This course considers the operational and strategic planning issues confronting managers in marketing. Topics include buyer behavior, market segmentation, product selection and development, pricing, distribution, promotion, market research, and international and multicultural marketing.

[Apply Now](#)

**MBA 599 - Strategic Management:** This capstone course integrates knowledge gained in previous graduate business courses. It centers on the theme that organizations achieve sustained success when their managers have astute, timely strategic game plans and they implement these plans with proficiency. Strategic management theory is used in the analysis of case studies of companies operating in the domestic and global marketplace. This course is to be taken in the student's last term, unless otherwise approved by the Director of the MBA Program.

## Project Management Specialization Subjects (15 credits):

**PRM 516 - Project Process Groups and Project/Product Life Cycles:** This course provides students with a comprehensive introduction to the five process groups of initiating, planning, executing, monitoring/controlling, and closing a project. Students will participate in activities associated with project selection and initiation principally. In addition, students will learn how the project life cycle (established phases to move a project from start to completion) can intersect with a product life cycle at various stages of development from concept to retirement.

**PRM 518 - Initiating, Planning and Executing a Project:** This course builds upon prior student development in initiating and planning a project by concentrating on project execution/control. Students will acquire skills necessary to execute the planned project tasks/procedures aimed at producing the deliverable: a product or service. In addition, students will employ procedures to manage, measure, and control project performance associated with risks/changes to cost, scope, schedule, and quality.

**PRM 520 - Monitoring, Controlling and Closing Projects:** Students learn how to monitor, control, and close a project. Students are taught how to use tools and techniques to oversee the successful implementation and follow-through of the project management plan and its sub-plans, which include the communications plan, risk management plan, quality management plan, human resources plan, and procurement plan. In addition, students will learn how to effectively monitor and control the "triple constraint" which is measured in the scope, costs, and time/schedule baselines.

**PRM 522 - Best Practices in Project Management:** This course introduces the nine project management knowledge areas which include integration, scope, time, cost, quality, human resources, communications, risk, and procurement. Students will apply the nine knowledge areas within a best practices project framework to manage the project and product life cycle. Students will attain a thorough understanding in how to use the various tools to manage the "triple constraint" for effective and efficient project completion. Lastly, the student will learn to apply a global perspective during the project's initiation, implementation, execution, monitoring, controlling, and closing activities.

**PRM 524 - Applied Project Management Case:** A project management capstone course which requires that students use the project management skills and abilities acquired in their previous courses to initiate, plan, execute, monitor, control, and close a successful project with the use of the project management information system (PMIS) called Microsoft Project. Project information is supplied to students throughout the course based on real-world scenarios in which the student must deal with all aspects of project management. The student is given a specific project with specified stakeholders and faces problematic issues including schedule delays, costs increases, human resource shortages, and equipment failure to name a few. The student must demonstrate his or her competency by using the skills and abilities attained throughout the course to lead the project to a successful completion. Upon completion of this course, the student will be prepared to successfully manage a complete project.

**Total Credit: 36 credits (or 12 subjects)**
